

Topology First-Year Exam, August 2021, Part 1

Work the following problems and show all work. Support all statements to the best of your ability.

1. Is it true that every continuous map $f : [0, 1] \rightarrow [0, 1)$ has a fixed point. Justify your answer.
2. Show that every compact Hausdorff space is regular.
3. Is it true that
 - (a) every continuous injective map $f : (0, 1) \rightarrow \mathbb{R}$ is an embedding?
 - (b) every continuous injective map $f : (0, 1) \rightarrow \mathbb{R}^2$ is an embedding?
4. Show that Greek letter theta Θ is not homeomorphic to the figure eight 8. Formally, $\Theta = S^1 \cup [-1, 1] \times \{0\}$ and $8 = S_-^1 \cup S_+^1$ are subspaces of $\mathbb{R}^2$, where S_-^1 is the unit circle centered at the point $(0, -1)$ and S_+^1 is the unit circle centered at $(0, 1)$.
5. This problem has two parts.
 - (a) Let $A \subset \mathbb{R}^2$ be a countable set. Prove that $\mathbb{R}^2 \setminus A$ is path connected.
 - (b) Let $B \subset \mathbb{R}^3$ be the union of a countable family of lines in $\mathbb{R}^3$. Prove that $\mathbb{R}^3 \setminus B$ is path connected.

Answer the following with complete definitions or statements or proofs.

6. State the Extreme Value Theorem.
7. State the Tietze Extension Theorem.
8. Let $\mathbb{R}_\ell$ denote the reals with the lower limit topology. Is the subspace $\mathbb{R}_\ell \cap [0, 1]$
 - (a) compact?
 - (b) connected?
9. Is every compact Hausdorff space normal?
10. Give definition of a locally connected space. Is every path connected space locally connected?
